

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

CLASSIFIED INDEX

TO THE

MAPS IN THE PUBLICATIONS OF THE GEOLOGICAL SOCIETY OF LONDON.

1811-1885.

By RICHARD BLISS,

(Librarian of the Redwood Library, Newport, R. I.)

The following index includes all the maps and plans, but not the sections, in the *Transactions*, *Proceedings*, and *Quarterly Journal* of the Geological Society of London.

Where no title is given, either on the map-plate or in the index to the plates, a title has been made up, and is so indicated by being enclosed in square brackets. Words added to the printed title for the purpose of elucidation are likewise similarly enclosed. An indented title indicates that the map to which it refers occupies a portion of the larger map designated by the title immediately preceding it.

The dates given are those of the imprint in the *Transactions*, and the year for which the volume is published in the *Proceedings* and *Quarterly Journal*.

The size is the space enclosed in the outer border lines — the first measurement given being the one parallel with the printed title. The contraction *ca* indicates the approximate size of a map or plan not enclosed by border lines.

In this index the scale is given in English statute miles, or in the customary subdivisions of the same. Where the map gives the scale in nautical miles a reduction has been made to the statute mile. For those maps in which no scale is given an approximate one has been calculated, when possible, which is shown by the contraction *ca* and enclosure in square brackets.

Owing to the imperfect numbering of the plates in the first volume of the *Journal* the number of the page is also given for better identification.

For the sake of convenience those districts of Asiatic Turkey bordering the Red Sea on the east are included in Arabia. In indicating the different publications of the Society T refers to the first series of the *Transactions*, Tt to the second series of the same, and P to the *Proceedings*; all the entries given without an initial letter refer to the *Quarterly Journal*.

The *Transactions* may be found in the Boston Public Library on shelf number *5371.1. The *Quarterly Journal* on *5826.1.

The classified index to the *Transactions*, *Proceedings* and *Quarterly Journal*, to the end of 1875, is on shelf number *5826.50.
